

How much weight can a sole R92 support?

One of the things I like about this bike is the options. The Sole R92 is an entry-level recumbent bike with a solid steel frame. Measuring 56" x 29" x 60" at a machine weight of 130 pounds, the bike supports up to 300 pounds in user weight. As a rule, I use maximum user weight as a good judge of overall bike stability.

Does the sole R92 have transport wheels?

Yes, the Sole R92 has transport wheels, but keep in mind it's tougher to move than a regular bike due to the seat structure. The R92 Recumbent Bike is Sole's only low-impact exercise bike designed especially for home gyms. It can help people lose weight, get toned, or rebuild strength with rehabilitative training.

Is the sole R92 a good workout bike?

Comfortable Effective Workout Introducing the new and upgraded Sole R92! Getting a great workout has never been so comfortable and relaxing. Experience the latest features and improvements in our best-selling recumbent bike.

What is a R92 exercise bike?

The "R" in R92 stands for recumbent, and these are exercise bikes which appear to recline. This is a bit misleading in my experience, as you're actually getting more of a lateral workout with your pedaling parallel to the rest of your body. The value here is a great emphasis on your quadriceps and calves and some relief for your spine and glutes.

What's new in the R92 recumbent bike?
