

What is California's Solar Rebate program?

Rebate amount: Up to \$1,000 per kWh. Savings: Can cover nearly 100% of the battery system cost--making storage essentially free for many qualifying families. Starting June 2, 2025, California is rolling out a new \$280 million incentive specifically for low-income residents installing paired solar and battery systems:

How much does a solar battery rebate cost?

The program provides homeowners with a rebate for installing a home solar battery. The value of the rebate ranges from \$150 to \$200 per kWh of storage capacity installed, depending on where you are located. A typical solar battery will earn a rebate of \$1,500 to \$2,000!

Does California offer a SGIP rebate for home battery storage?

Home battery storage is crucial for backup storage and maximum solar savings in California -- and the Self-Generation Incentive Program (SGIP) rebate is designed to help lower the cost. With fresh funding in 2024, a majority of Californians are eligible for a \$1,500 SGIP rebate when they install an average-sized battery (10 kWh).

Are solar batteries cheap in California?

Solar batteries also qualify for the federal solar tax credit, so battery installations in California are about as cheap as they come. California's Self-Generation Incentive Program (SGIP) is a tiered rate structure incentive that provides rebates statewide for battery storage projects based on the capacity of the battery installed.

Do I need solar panels to qualify for the SGIP battery rebate?

No, you do not need to have or buy solar panels to qualify for the SGIP battery rebate. However, there are substantial benefits to pairing solar panels with battery storage. See how much solar panels cost in your area. Zero Upfront Cost. Best Price Guaranteed.
