

Can You claim a solar energy credit if you add battery storage?

Although the IRS and Department of Energy have yet to issue guidance on the matter, it appears homeowners will be able to claim the Residential Clean Energy Credit for adding battery storage added to existing solar systems.

Do solar batteries qualify for a tax credit?

A vast majority of batteries installed between 2022 and 2032 will qualify for the solar tax credit expanded by the Inflation Reduction Act. The only qualifications specified by the Inflation Reduction Act are that the battery must be installed in a taxpayer's residence in the US, and the capacity of the battery storage must exceed 3 kWh.

Are solar panels tax deductible?

The current federal clean energy tax credit gives homeowners back 30% of the upfront cost to install solar panels at tax time, the year after they're installed. Luckily, batteries also qualify for the tax credit, whether or not they're installed with solar panels.

Does battery storage qualify for a federal tax credit?

Yes, it was quite the ride waiting for a climate bill that would expand solar and battery incentives. But the ride is over and battery storage definitely qualifies for the 30% federal tax credit, in addition to solar, wind, geothermal heat pumps, and fuel cells.

Does battery storage qualify for IRA tax credit?

Yes, standalone battery storage now qualifies for the 30% Residential Clean Energy Credit, introduced in 2023 under the IRA. This significant change means homeowners can receive a 30% tax credit for the installation of battery storage systems, even if they are not paired with new solar panels.

Can a battery be used as a tax credit?

The only qualifications specified by the Inflation Reduction Act are that the battery must be installed in a taxpayer's residence in the US, and the capacity of the battery storage must exceed 3 kWh. The 30% tax credit can be used to reduce your tax liability and can be carried forward if it's not all used at once.
