

Is there a convenient way to typeset the floor or ceiling of a number, without needing to separately code the left and right parts? For example, is there some way to do $\lceil x \rceil$ instead of \lceil ce...

`] {floor(3*x)+2}; end{axis} end{tikzpicture} end{document}` The sample points are marked. The number of samples is the number of lines plus one for an additional end point: It ...

The correct answer is it depends how you define floor and ceil. You could define as shown here the more common way with always rounding downward or upward on the number line.

17 There are some threads here, in which it is explained how to use \lceil ceil \rceil ceil \lfloor floor \rfloor floor. But generally, in math, there is a sign that looks like a combination of ceil and floor, which means ...

4 I suspect that this question can be better articulated as: how can we compute the floor of a given number using real number field operations, rather than by exploiting the printed notation, ...
