

We normally have tons of sunshine, so re-charging the battery (s) shouldn't be an issue. I'm thinking I could run a refrigerator and some fans off (solar battery, around \$1,600).. for a few ...

unpopular opinion: tough solar is overhyped in that its advantages will be seen on a 10-year span. battery powered gshocks can run 5-10 years on a single battery. every model manual states ...

It is common to insure the panels against atmospheric events, but insurance on the battery is very rare. I am not sure to what extent the inverter and voltage dischargers can protect it from ...

&quot;Power Bank&quot; means battery. For a &quot;solar power bank&quot;, combine a solar panel like this one with a battery pack like this one (since the tiny solar panels on combined solar panel batteries are toys), which sum to just under \$50.

In our case, Tesla solar with batteries was cheaper than other companies without batteries, so it made no sense going without batteries. I'd suggest others looking at Solar get multiple quotes ...

Casio's battery efficiency leads to very long battery lives (often much longer than the official Casio statistics). Tough Solar, while nice increases cost, arguably reduces screen visibility on some ...

Buy a grid-connected battery for less than \$10K for the purpose of charging it during Super Off-Peak and consuming during On-Peak. Don't let vendors bundle batteries with solar, ask for a battery-only quote w/installation and warranty. iv. ...

This subreddit is for solar photovoltaic (PV) professionals, owners, and enthusiasts. The solar module and the systems it drives - whether small residential installations ...

Summertime, my highest bill was \$90 on top of my \$80 solar bill. I'm wondering if I should add a battery and just pay the price if it'll help my bills get to \$0 possibly. Is it worth an extra \$80 a ...

Discussion of solar photovoltaic systems, modules, the solar energy business, solar power production, utility-scale, commercial rooftop, residential, off-grid systems and more. Solar ...

The main benefit of solar is the battery will stay at a consistent voltage until it finally dies, as long as you keep it charged. So you get consistent performance throughout the life of the battery ...

We had a 6k Solar installed when we built this home 6 years ago but decided not to get a battery because they were \$10k or more. Now battery prices are \$3k to \$4k and we might start to ...

????,??????500kW????????????????????,??????,????????????????????,???????????????????? ...

I would do both. I'd get a hybrid DC coupled solar+battery system, and something like the EG4 Chargeverter to have the option to recharge the batteries from the generator you already have. ...

Two primary options for you with a limitation of \$20k. Go full solar, no battery. The batteries cost a LOT compared to the solar right now - even with the rebate. Unless you're losing power daily ...

EV batteries are approximately \$132 / kWh. But looking at battery backup for my solar / home system the prices are MUCH higher. For example, an Enphase 10.08 kWh battery is approximately \$8000, which work out to about \$800 per ...
