

What does the Orange blinking light on a hoverboard mean?

An orange blinking light on a hoverboard indicates a fault code for a bad battery. On some models, it might come on when the hoverboard is plugged in to charge. (For more information, please refer to my in-depth guide about the orange blinking light on a hoverboard.)

How do I know if my hoverboard battery is bad?

If the green indicator light on the charger box stays green, turn the hoverboard on while the charger is still connected. If the hoverboard turns on and you get a flashing orange battery indicator on the hoverboard, your battery is bad and needs to be replaced. You can either ship it to us for repair.

How do li-ion hoverboard batteries function?

Li-ion hoverboard batteries function with a battery management system (BMS) on each battery pack. Each battery has individual wires connected/welded to it that lead into the BMS. The BMS then has a red (positive) and black (negative) wire that leads into a yellow/orange clip known as XT60 connector plugs.

Does my hoverboard require a new battery?

If the hoverboard does not turn on or if it works when plugged into the wall but not when unplugged, or if the light in the center flickers and fades out when turned on, then you need a new battery for your hoverboard.

What is the best hoverboard battery replacement?

The best hoverboard battery replacement is one that is made using Samsung or LG cells. Many people mistakenly refer to a battery made this way as a Samsung hoverboard battery or an LG hoverboard battery. However, neither of these companies actually manufacture hoverboard batteries.

Where is the hoverboard battery located?

The hoverboard battery is located on the side OPPOSITE of the charger port. To access it, use a Philips head screwdriver to remove the screws from this side of the plastic shell. Be aware that screws might be hidden under warranty stickers.

3. Beeping and flashing The green light will blink when your device's battery drains below 20%. But if the red light starts blinking, it warns of a critically low battery. In that case, you need to charge your hoverboard right
