

It is possible to replace the battery by removing the back case of the calculator, but opening the back of the calculator voids the one-year, limited warranty. This must be done carefully, as we cannot be held responsible for any damage ...

The TI-36X is also designed with energy efficiency in mind. It runs on solar power with a backup battery, ensuring that it remains functional even in low-light conditions. This feature not only extends the lifespan of the calculator but also ...

But here's the kicker: even solar-powered devices need battery replacements eventually. Let's break down how to give your calculator a power boost without frying its circuits.

The TI-36X has a battery as well just like the fx-991EX (as well as a capacitor backup). Without the capacitor you wouldn't even have a few seconds when cutting the light to the solar cell, so ...

Carefully slide the spudger all the way underneath the solar panel until it detaches from the tape. If the solar panel does not completely disconnect once you have fully inserted the spudger, you ...
